## Software Engineer 3

✉ preetanurag5@gmail.com ☎ 7631129471 📍 Bangalore 🌐 Preet Anurag

As a dedicated and innovative Software Engineer with **4+ years of experience**, I specialize in distributed microservice architecture and backend development. Currently, I am contributing to the workflows team at 6sense as a Software Engineer 3. My passion for solving complex problems and delivering robust, scalable solutions drives my professional journey.

### PROFESSIONAL EXPERIENCE

- 6sense** Jul 2025 – Present | Bangalore  
*Software Engineer 3* 
  - Worked on large-scale write-heavy systems processing millions of records using Event-Driven Architecture, including high-volume segment processing and real-time data pipelines.
  - Led end to end design, planning and development of Preview for Triggered based Signal implementing both Account and People Level Signals within a tight deadline of 2 weeks.
  - Leveraged Agentic AI-driven development workflows using MCP servers, automated implementation planning, and intelligent debugging systems while building reusable engineering frameworks such as Agents, SKILLS modules, and lessons-driven context systems reducing repetitive development effort by approx 30~40%.
  - Led the end-to-end onboarding of SEP(Gong) and CRM (MS Dynamics), aligning it with existing Workflow Action Nodes and delivering the integration within a 1 month timeline for each of them.
  - Enhanced Workflow Preview Execution to support partially configured nodes, significantly improving customer visibility and understanding of executions before run.
  - Designed and implemented an automated approach to discover and add unit tests across ~80 Java modules, integrating them into the GitHub build pipeline with initiatives to enforce & improve test coverage, added windsurf skills/rule to get 85% coverage.
  - Actively participating in on-call rotations and successfully resolved 25+ production support tickets, ensuring system stability and minimal customer impact along with creating a windsurf AI workflow to group and debug the similar issues reducing debugging time by 30-40%.
- Cradlepoint, Part Of Ericsson**   
*Software Development Engineer - II* Apr 2024 – Jun 2025 | Bangalore
  - Spearheaded the end-to-end design of API v3 for a major customer-facing interface of Commerce Team, enabling clearer visibility into device data and subscription mappings, and improving customer transparency and experience.
  - Contributed in design and implementation of new Ericsson Private 5G products integration with our commerce system within a tight timeframe of 2 months.
  - Proposed and designed a high-level solution for a company-wide hackathon, which was accepted by the Product Manager and successfully transitioned into a feature. Once implemented, this solution is expected to save approximately 8 developer hours per sprint while enhancing visibility for the Operations Team in Order, license, subscription and entitlements management.
  - Spearheaded the design and implementation of a novel identifier system across all microservices, eliminating SFDC reliance; slashed order processing time from 45-50 seconds to 8-10 seconds, enhancing workflow efficiency.
- Software Development Engineer - I* Jun 2022 – Mar 2024 | Bangalore
  - Worked on major projects of commerce and internal-apps team involving order, subscription, license and entitlements management on the network devices, consistently adding new features and improving the processing time over the time.
  - Designed and implemented inter-service communication features utilizing RabbitMQ within a tight time-frame of 2-weeks.
  - Executed rigorous testing protocols using JUnit, Mockito, and pytest; identified and resolved critical issues that improved software stability, ensuring smooth deployment with only two bugs reported in production over 6 months.
  - Being part of on-call and have resolved defects/bugs during QA testing, pre-production, production, and post-release.
  - Recognized with a Spot Award and Quarterly Award for outstanding performance.
- Software Development Intern* Jan 2022 – Jun 2022 | Bangalore
  - Designed and successfully migrated the SRCs provisioning process from a hardcoded file-based system to a RESTful API plus UI based system, significantly enhancing input scalability and quicker processing time, reduced 4-8 developer hours per sprint.

### PROJECTS

- Wealth Desk : An AI enabled Portfolio Analysis and Management Website** 
  - Built a full-stack personal portfolio management platform using Spring Boot, React JS, typescript/javascript, PostgreSQL, OpenAI and Redis to track stocks, mutual funds, FD/RD, watchlists & Results.
  - Integrated broker sync workflows for brokers(Zerodha), with live price updates, consolidated broker-level portfolio views, and market-data services for stock prices, mutual fund NAVs, and result calendar tracking.
  - Integrated OpenAI-powered portfolio intelligence for global portfolio Q&A, contextual stock/MF insights, web-assisted follow-up analysis and strategy discovery.
  - Built a strategy-driven Watchlist module where users can define custom stock discovery strategies, run AI-assisted searches, review strategy-matched candidates, and add stocks directly to the watchlist.

### EDUCATION

- B.Tech (Computer Science)** 2018 – 2022  
*Kalinga Institute Of Industrial Technology*  
CGPA: 9.37/10

### SKILLS

- Languages, Frameworks & Databases:** Java, Python, Spring Boot, Microservices, REST APIs, Hibernate/JPA, Kafka, RabbitMQ, PostgreSQL, S3, Redis, SingleStore, Hive(basic), React.js
- Cloud, DevOps & Tools:** Docker, AWS, CI/CD, Jenkins, GitHub Actions, GitHub/GitLab, IntelliJ, Windsurf, DataDog, SumoLogic, PagerDuty, Observe, LaunchDarkly, DBeaver, JUnit, Mockito, PyTest
- GenAI & AI Engineering:** OpenAI APIs, MCP, AI-Assisted Development Workflows, Agentic AI workflows, Context Engineering, AI automation, LLM orchestration, Prompt Engineering
